

PROTECTING THE ENVIRONMENT CONCERNS US ALL

Do not run the motor unnecessarily

Help us to reduce the emission of exhaust gases to a minimum and refrain from turning on the engine when the windows are iced up before you leave. Better treat yourself to a coffee or use an ice scraper 😊

Did you already know? There is a very good ski bus service in Olang.

We remind you that the engine should be turned off at a stop (art. 157 of the Road Traffic Code).

Avoid iced car windows

1. Icy car windows are a nuisance, especially for those who have to drive to work early in the morning.

If you can't park your car in a protected or covered place, you can resort to a simple towel, for example. It can be sprayed with a saline solution and placed on the windshield (only when the temperature is above zero).

Another excellent remedy is spraying the windshield with water and vinegar: this will prevent ice formation.
2. Certainly an inexpensive and affordable solution. However, it is important to always choose vehicle-specific products. The advantage of ice scrapers is that they are designed precisely so that they do not cause damage to the windshield. Namely, they are equipped with a rubber that not only effectively removes the layer of ice, but also does not leave scratches on the glass. Using different ice scrapers could scratch the car windows: This is because most of them contain a metal component that can damage the glass.

Therefore, it is always a good idea to have an ice scraper on hand to prevent ice from becoming an everyday problem. When using the ice scraper, the heater vents should be pointed at the windshield. It is also important not to apply excessive pressure to the windshield.
3. Olang offers an excellent ski bus service to the ski area. Ski buses run regularly between the ski area and the valley station. If your accommodation does not have a stop nearby, you can use the city bus to reach the ski lifts or the nearest ski bus stop: www.olang.com/skibus
